

Chest Accel (Acc: 88.5%, F1: 0.885)

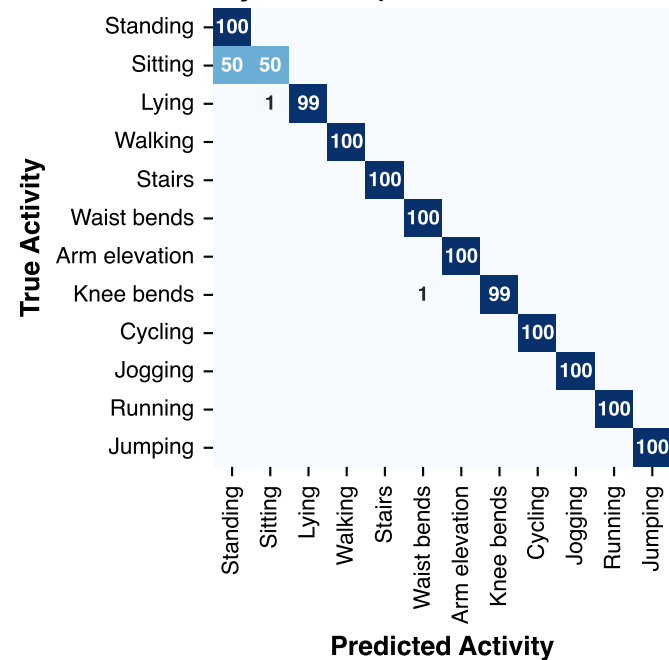

Ankle Accel (Acc: 85.9%, F1: 0.864)

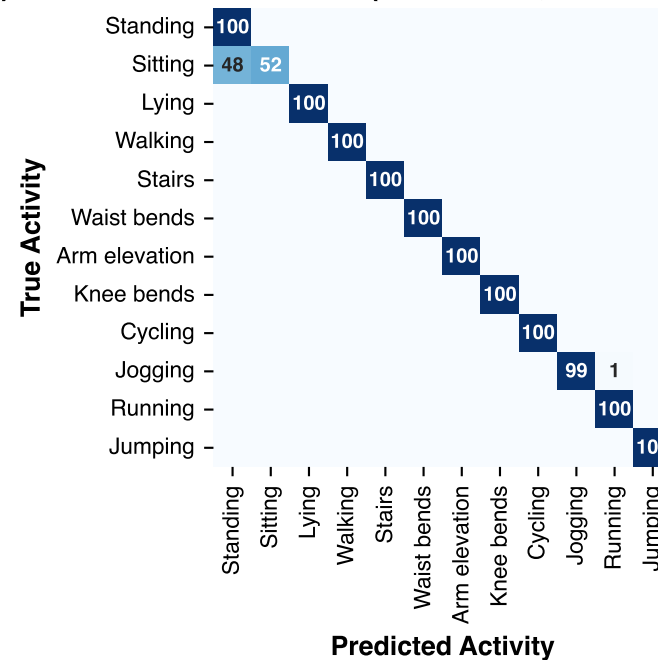

Wrist Gyro (Acc: 85.6%, F1: 0.825)

Early Fusion (Acc: 95.3%, F1: 0.954)

Late Fusion (Acc: 95.6%, F1: 0.957)

Evaluation Insights:

- Values are row-normalised percentages (%)
- Unimodal Chest confuses Sitting vs Standing and Walking vs Climbing Stairs.
- Unimodal Ankle confuses static trunk postures (Standing vs Sitting) and upper arm gestures.
- Unimodal Wrist fails on leg-dominant tasks (Walking vs Cycling vs Jumping).
- Multimodal Early & Late Fusion resolve modality blind spots, achieving near-perfect discrimination across all 12 activities.
